Dimensions	14.73 cm x 5.35 cm x 3.4 cm
Field of View	140x140 Head-to-Toe Field of View
Video	Ring Retinal 2K with 6x zoom
Power	Lithium Ion Battery
Connectivity	WiFi 6, dual-band 2.4GHz/ 5GHz
Operating conditions	-20C to 50C

Warranty

One-year limited warranty, and including theft protection. If you are a consumer, the limited warranty is in addition to your consumer rights, and does not jeopardise these rights in any way. This means you may still have additional rights at law even after the limited warranty has expired. Learn more [here](#).

The Ring app is required for setup. It is compatible with iOS, Android, Mac and Windows 11 devices.

FAQ

What's included in the box with the Battery Video Doorbell Plus (2nd Gen)?

Your Battery Video Doorbell Plus (2nd Gen) comes complete with everything needed for installation, including the doorbell unit with Quick Release Battery, mounting bracket and hardware, a USB-C charging cable, corner kit, installation tools and screws, a quick start guide, and a security sticker.

Can I install the Battery Video Doorbell Plus (2nd Gen) without any wiring?

Yes! The doorbell is designed for completely wire-free installation using the included rechargeable battery. If you have existing doorbell wires, you can optionally connect them to enable trickle charging and mechanical chime functionality, but wiring isn't required for full feature access.

What are my charging options?

The Battery Video Doorbell Plus (2nd Gen) offers flexible charging options to suit your needs. You can charge using the included USB-C cable or connect to existing doorbell wires for trickle charging. The removable battery design also allows you to purchase a spare battery. Either a second unit of the Quick Release Battery Pack or the new Quick Release Ultra Battery Pack, also compatible with Battery Video Doorbell Plus (2nd Gen), for uninterrupted coverage during charging.

What's the difference between daytime and nighttime video quality?

The doorbell maintains consistent 2K resolution (1920x1920) throughout all lighting conditions. During daytime, you'll see full colour, HDR-enhanced video. In low light conditions, true colour low light sight works down to 0.25 lux, and in complete darkness, infrared night vision with adaptive brightness ensures clear footage.

How do I know when to charge the battery?

The Ring app provides comprehensive battery monitoring, including real-time battery level display, low battery notifications, historical battery usage data, and estimated remaining battery life. We recommend initiating a charge when the battery level reaches 20% to ensure uninterrupted coverage.

What's the difference between a built-in battery and quick release battery?

A built-in battery, like the one in Battery Video Doorbell (2nd Gen), requires removing the entire device from the wall mount to recharge.

A quick-release battery, on the other hand, allows you to keep the device mounted while you remove and recharge just the battery. With a spare battery pack, you can enjoy uninterrupted coverage while charging.

Can I still use existing doorbell wires?

Yes! When connected to existing doorbell wiring (8-24VAC), you'll benefit from continuous trickle charging of the battery, mechanical chime functionality, and extended battery life. Remember, wiring is entirely optional and not required for accessing any of the doorbell's features.

Do I need a Ring Protect subscription?

While basic features work without a subscription, a Ring Protect plan is required for video recording, person alerts, and other advanced features.

How much video history is stored?

With a Ring Protect plan, you can access up to 180 days of video history, depending on your subscription level.
